Poultry Manure Based Fertilizer Imported to Israel

The following Veterinary Services Certificate (printed on area office letterhead) is required to accompany shipments of poultry manure based fertilizer to Israel.

Prior to completion of the attached certificate:

- VS must inspect the production facility at least annually to verify certifications, and serve as federal level supervision.
- Products must not origin from areas with 30 km of any exotic Newcastle disease (END).
- Exporters must present laboratory test results with the certificate verifying that the exported material (lot by lot) was (were) tested for Salmonella with a negative result. NCIE feels that a negative salmonella test on a manure based product is adequate to verify the other microbiological type statements.
- When letter head certificates are issued, VS Forms 16-4 should not also be issued. If an exporter wishes to have a VS From 16-4, then all below information needs to be placed on the 16-4, instead of issuing a letterhead certificate not in addition.

Certificate number: ______ (Valid Only if the USDA Veterinary Seal Appears Over the Certificate #)
